

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Lift trucks are quite costly pieces of equipment in view of the fact that a new electric forklift model could cost anywhere from \$18,000 to \$25,000, for a five thousand pound machinery. In addition, some thousands of dollars would have to be invested in a battery charger and battery. The same internal combustion lift truck of similar lift capacity would cost a little less and the diesel models that are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned lift trucks are a choice so as to save a great deal of cash because they cost less than half the price of new models.

Several people think they would face more maintenance issues if they purchase a reconditioned lift truck and are skeptical of acquiring a second-hand lift truck at a sale price. A properly reconditioned lift truck will function just along with a new one and any worries of maintenance are unfounded. Though your lift will get heavy use, as long as you take proper care of the machine, it will serve your requirements and probably save you a lot of money.

It is important to determine what the seller means by a refurbished or reconditioned lift truck when thinking about buying a second-hand lift truck. Numerous businesses do a very good job reconditioning a unit previous to selling it. This consists of disassembling the lift truck, rebuilding the engine, sandblasting the lift and after that reassembling everything and finishing with a fresh coat of paint.

To properly and thoroughly rebuild a lift truck engine, a good company will entirely disassemble it. A heat cleaning system can then be utilized to clean all the components. As soon as this step has been done, all of the components are checked to see if they have any defects, any breakage or any extensive wear. Certain components like for instance cylinder heads, crankshafts, cylinder blocks and connecting rods are resized, reground and resurfaced if needed. Various components like bolts, gears, nuts etc. are replaced or repaired as needed.

As soon as the overhaul has been accomplished, the engine is rebuilt by hand. After being put back together, a series of tests are applied to the working machine to be able to check all of the parts and make certain there are no leaks or problems. If any problems occur, the crucial adjustments are done.

There is no reason to be alarmed about obtaining reconditioned lift trucks from quality sellers. The process the machines go through to be rebuilt guarantees the utmost reliability. Upkeep expenses can really work out to be less since you would avoid the initial phase of higher maintenance projections that a new forklift has as it is broken in. By following routine upkeep schedules and taking care of the equipment appropriately, a reconditioned lift truck will serve you well.
